OUR PATENTED, SIMPLE, PROBLEM-SOLVING DESIGN IS TURNING HEADS IN THE INDUSTRY, EARNING MULTIPLE AWARDS, AND SELLING MILLIONS. WELCOME TO THE FUTURE OF WINDOW SCREENS!

TRADITIONAL WINDOW SCREEN

technology is over 100 years old and loaded with problems. We have all dealt with one or more of these issues:

- Bulky and flimsy aluminum frames that bend and damage easily, require color matching, and impede your view to the outside.
- Complicated hardware that breaks with normal use and makes installation and removal difficult and frustrating.
- Traditional window screen failure rate is approximately 1 per 30 units, driving up the overall cost of ownership and creating a great deal of inconvenience for the homeowner.

FLEXSCREEN

solves every one of these problems with our innovative, award-winning design:

- Our sleek, flexible spring-steel frame, coated in exterior-grade PVC, is practically indestructible, scratch-resistant, and impervious to weather extremes. It hides in the screen pocket, eliminating the need for color matching, and dramatically improving sightlines. With FlexScreen you'll enjoy the ENTIRE view!
- ZERO hardware = effortless installation and removal in seconds - from outside OR inside your home!
- Our replacement rate is approximately 1 per 3,600 units - making FlexScreen essentially the last screen you will ever need to buy. In other words, FlexScreen owners never have to think about their window screens again!
